

## **NeuRecover™ - Patented, Doctor Recommended Brain Nutrition - A Healthy Alternative to Reduce Cravings**

The brain chemistry involved in many forms of dependence (overeating, alcohol abuse, etc.) has been carefully described by qualified researchers for almost 30 years. Scientists have now concluded that compulsive craving for alcohol or drugs in most instances has a genetic origin that is triggered by environmental factors. Alcohol dependency is not a sign of a weak individual, or a social miscreant; it is not an indication of irresponsibility or instability, but rather it is an actual physical condition that some individuals are born with and others unwittingly stumble upon. This vicious cycle is continued in people's lives until they discover a healthy alternative to stop the urges to use alcohol.

We now know that the deficiency of a number of neurotransmitters is associated with alcohol abuse and dependence. These neurotransmitters are GABA, Enkephalin, Dopamine and Serotonin. When these neurotransmitters are in a deficient state, either via genetics or environmental stress, the person experiences unpleasant and unacceptable feelings of anxiety, inadequacy, anhedonia (lack of pleasure), and emotional instability.

**NeuRecover™ is a natural means of dealing with neurotransmitter deficiency. Alone NeuRecover™ relieves the urge to drink alcohol and increases internal calm.** It must be understood that an individual's brain naturally produces certain chemicals from the food they consume. Once a person turns to an outside source (such as alcohol), which contains some of the chemicals that the brain already produces, the brain recognizes an overabundance of these elements and reduces their production. Although the brain has slowed the production of these neuro-chemicals, it still requires them to maintain a balanced function. This is where urges to use alcohol as a source come in.

### **How NeuRecover™ works**

**The amino acids and minerals help to balance the neuro-chemicals in the brain.** This healthy alternative that NGI offers is a natural replacement for the chemicals that the brain is lacking. Over the years, the product has seen tremendous success and people who use the product consistently have experienced alleviation of their urges and cravings. NeuRecover™ has provided individuals who are serious about reducing their use of alcohol with an excellent source of support.

### **Recommended Use**

Directions: Take one (1) one or two (2) capsules three (3) times daily. Take one (1) hour before or two (2) hours after meals with a few ounces of juice or water.

**Warning:** Phenylketonurics, contains phenylalanine. Not intended for use by phenylketonuric, pregnant and lactating women. Not to be taken with MAOI's or antipsychotic medications. Persons taking MAOI's should only use the product under the supervision of a medical doctor. Accidental overdose of iron-containing products is a leading cause of fatal poisoning in children under the age of 6. Keep all bottles out of reach of children. In case of accidental overdose, call a doctor or poison control immediately.
